Medicare Part C Medical Coverage Policy

Breast Implant Removal

Origination:  July 31, 1992  
Review Date:  April 17, 2019  
Next Review:  April, 2021

DESCRIPTION OF PROCEDURE OR SERVICE
The surgical removal of inflatable, saline-filled and silicone gel-filled prostheses is performed through sub-mammary or peri-aureolar incisions.

POLICY STATEMENT
Coverage will be provided for breast implant removal when it is determined to be medically necessary, as outlined in the below guidelines and medical criteria.

BENEFIT APPLICATION
Please refer to the member’s individual Evidence of Coverage (E.O.C.) for benefit determination. Coverage will be approved according to the E.O.C. limitations if the criteria are met.

Coverage decisions will be made in accordance with:
• The Centers for Medicare & Medicaid Services (CMS) national coverage decisions;
• General coverage guidelines included in original Medicare manuals unless superseded by operational policy letters or regulations; and
• Written coverage decisions of local Medicare carriers and intermediaries with jurisdiction for claims in the geographic area in which services are covered.

Benefit payments are subject to contractual obligations of the Plan. If there is a conflict between the general policy guidelines contained in the Medical Coverage Policy Manual and the terms of the member’s particular Evidence of Coverage (E.O.C.), the E.O.C. always governs the determination of benefits.

INDICATIONS FOR COVERAGE

A.  Preauthorization by the Plan Review is required;

B.  Removal is covered when it is reasonable and medically necessary due to complications from an implantation, including but not limited to:
    1.  Mechanical complication of breast prosthesis (i.e., rupture/leakage, failed implant, implant extrusion);
    2.  Infection or inflammatory reaction due to breast prosthesis; including infected breast implant or rejection of breast implant;
3. Other complication of internal breast implant; including siliconoma, granuloma, interference with diagnosis of breast cancer, painful capsular contracture with disfigurement.

C. Breast Implant Removal may also be covered even when the implant insertion was not a covered service or when the removal is “not related to” the initial implantation. Complications requiring treatment after the member has been discharged from the hospital stay in which they received the implant are covered when reasonable and necessary. Coverage could be provided for subsequent inpatient stays or outpatient treatment. (Example: treatment of an infection at the surgical site that occurred following discharge from the hospital.)

WHEN COVERAGE WILL NOT BE APPROVED
A. Breast malposition/asymmetry for cosmetic purposes.
B. Treatments of acute complications of a non-covered breast implant insertion if the services could be expected to have been included in the global fee, as postoperative visits.
C. Follow-up care and treatment of complications for a non-covered implant insertion that occur during the hospital stay for the implant insertion are not covered services.

BILLING/ CODING/PHYSICIAN DOCUMENTATION INFORMATION
This policy may apply to the following codes. Inclusion of a code in the section does not guarantee reimbursement.

Applicable codes: 19328, 19330, 19370, 19371, 19380, L8600

The Plan may request medical records for determination of medical necessity. When medical records are requested, letters of support and/or explanation are often useful, but are not sufficient documentation unless all specific information needed to make a medical necessity determination is included.
