Description of Procedure or Service

Intra-articular injection of hyaluronan (HA) into osteoarthritic joints is thought to replace endogenous HA, restore the viscoelastic properties of the synovial fluid, and improve pain and function. The majority of studies to date have assessed HA injections for knee osteoarthritis, and this is the U.S. Food and Drug Administration (FDA) approved indication. Other joints, such as the hip and shoulder, are currently being investigated for intra-articular HA treatment of osteoarthritis (OA).

Hyaluronan (HA), also known as hyaluronate or hyaluronic acid, is a naturally occurring macromolecule that is a major component of synovial fluid and is thought to contribute to its viscoelastic properties. Chemical crosslinking of hyaluronan increases its molecular weight; crosslinked hyaluronans are referred to as hylans. In osteoarthritis, the overall length of HA chains present in cartilage and the HA concentration in the synovial fluid are decreased. Intra-articular injection of HA (IAHA) has been proposed as a means of restoring the normal viscoelasticity of the synovial fluid in patients with osteoarthritis. This treatment has been called viscosupplementation. Currently, no curative therapy is available for OA, and thus the overall goals of management are to reduce pain and prevent disability.

The FDA has not approved intra-articular hyaluronan for joints other than the knee.

***Note: This Medical Policy is complex and technical. For questions concerning the technical language and/or specific clinical indications for its use, please consult your physician.

Policy

BCBSNC will provide coverage for intra-articular hyaluronan injections when it is determined to be medically necessary because the medical criteria and guidelines noted below are met and a preferred product is used. Preferred products include Euflexxa® and Synvisc/Synvisc One®.

Benefits Application

This medical policy relates only to the services or supplies described herein. Please refer to the Member's Benefit Booklet for availability of benefits. Member's benefits may vary according to benefit design; therefore member benefit language should be reviewed before applying the terms of this medical policy.

When Intra Articular Hyaluronan Injections are covered

Euflexxa® and Synvisc/Synvisc One® injections may be considered medically necessary for the treatment of pain in osteoarthritis of the knee when the following criteria are met:
Intra Articular Hyaluronan Injections for Treatment of Osteoarthritis of the Knee

- Conservative therapy consisting of exercise, physical therapy or weight loss, and pharmacologic therapy consisting of analgesics and non-steroidal anti-inflammatory drugs (NSAIDs) has failed to provide functional improvement after at least 3 months, or the individual is unable to tolerate conservative therapy; AND
- Evidence of joint space narrowing, subchondral sclerosis, osteophytes, and sub-chondral cysts present on radiographs; OR
- Knee pain accompanied by at least 5 of the following:
  1. Crepitus
  2. Erythrocyte sedimentation rate (ESR) less than 40 mm/hr
  3. Bony enlargement
  4. Bony tenderness
  5. Less than 30 minutes of morning stiffness
  6. No palpable warmth of synovium
  7. Over 50 years of age
  8. Rheumatoid factor less than 1:40 titer (agglutination method)
  9. Synovial fluid signs (clear fluid of normal viscosity and white blood cells less than 2000/mm³)

Non-preferred intra-articular hyaluronan injections may be covered if the criteria above have been met and the patient has previously used at least one of the preferred drugs as indicated above, and such drug has been detrimental to the patient’s health or has been ineffective in treating the patient’s condition.

Non-preferred intra-articular hyaluronan injections may be covered if the criteria above have been met and the patient is currently receiving treatment with a non-preferred drug.

Additional treatment series of intra articular hyaluronan injections may be considered medically necessary when the following criteria are met:
- Initial criteria for use of intra articular hyaluronan injections were met, AND
- Medical record documentation shows a reduction in the dose of analgesics/anti-inflammatory medication and significant improvement in pain and functional capacity following the previous series of injections, AND
- At least 6 months have lapsed since the completion of the prior treatment course.

When Intra Articular Hyaluronan Injections are not covered

The use of intra-articular hyaluronan injections in the knee is not covered when the above criteria are not met.

Intra-articular injections in joints other than the knee are considered investigational.

Policy Guidelines

In May 2013, the American Academy of Orthopaedic Surgeons (AAOS) published the second edition of an evidence based guideline titled, “Treatment of Osteoarthritis of the Knee.” In these guidelines, the AAOS does not recommend using hyaluronic acid for patients with symptomatic osteoarthritis of the knee. This rationale is based on limitations in the literature, which include variable quality of studies, a large degree of heterogeneity in outcomes, and possible publication bias.

For individuals who have osteoarthritis of joints other than the knee who receive IA hyaluronan injections, the evidence includes RCTs, systematic reviews of RCTs, and observational studies. Relevant outcomes are symptoms, functional outcomes, and treatment-related morbidity. Meta-analyses of RCTs either have not found statistically significant benefits of the procedure on health.
Intra-Articular Hyaluronan Injections for Treatment of Osteoarthritis of the Knee

outcomes or have found benefits that were statistically, but likely not clinically, significant (eg, 0.27-point improvement on a 10-point visual analog scale for hip osteoarthritis). The evidence is insufficient to determine the effects of the technology on health outcomes.

Billing/Coding/Physician Documentation Information

This policy may apply to the following codes. Inclusion of a code in this section does not guarantee that it will be reimbursed. For further information on reimbursement guidelines, please see Administrative Policies on the Blue Cross Blue Shield of North Carolina web site at www.bcbsnc.com. They are listed in the Category Search on the Medical Policy search page.

Applicable codes: C9465, J7320, J7321, J7322, J7323, J7324, J7325, J7326, J7327, J7328, J3490

BCBSNC may request medical records for determination of medical necessity. When medical records are requested, letters of support and/or explanation are often useful, but are not sufficient documentation unless all specific information needed to make a medical necessity determination is included.

Intra Articular Hyaluronan Injections for Treatment of Osteoarthritis of the Knee

regarding Euflexxa added to "Policy Guidelines" section. Euflexxa is free of animal proteins and can be administered to patients who are allergic to chickens, eggs or feathers.

8/21/06 References updated. Specialty Matched Consultant Advisory panel review 7/24/06. No changes to policy criteria. (adn)

9/18/06 Information regarding repeated treatment cycles deleted from the When Covered section. The following statement added to When Not Covered section: "Repeated treatment cycles are considered investigational." Also added a statement to Policy Guidelines section "There is limited evidence regarding the effectiveness of multiple courses of intra-articular hyaluronan injections, therefore repeated treatment cycles are considered investigational. BCBSNC does not provide coverage for investigational services." Notification date 9/18/06. Effective date 11/27/06. (adn)

2/12/07 Billing/Coding section updated to reflect 2007 code changes. (adn)

6/18/07 Code J7319 removed from policy. No longer a valid code.

12/31/07 Coding update. Deleted codes Q4083, Q4084, Q4085 and Q4086. Added codes J7321, J7322, J7323 and J7324 to Billing/Coding section. (adn)

2/11/08 Reformatted the When Covered section into a numbered list and added the following statement: "Repeated courses of intra-articular hyaluronan injections may be considered medically necessary under the following conditions: Significant pain relief was achieved with the prior course of injections; and at least six months have passed since the prior course." The statement regarding repeated treatment cycles was deleted from the Not Covered section. Rationale regarding repeated treatment cycles and use of hyaluronan on joints other than the knee added to the Policy Guidelines section. (adn)

8/25/08 Item A.1. in the When Covered section revised to read: Diagnosis of osteoarthritis substantiated by x-ray or other imaging or arthroscopic findings. References updated. Specialty Matched Consultant Advisory Panel review 6/17/08. No change to policy statement. (adn)

3/2/09 Description section revised for clarity. Medical Policy changed to Evidence Based Guideline.

1/5/10 HCPCS Code J7322 replaced with Code J7325.

4/26/11 References updated. No changes to guideline statements. (mco)

8/16/11 Specialty Matched Consultant Advisory Panel review. No changes to guideline statements. (mco)

12/30/11 New code J7326 added to “Billing/Coding” section. Effective date 1/1/2012. (mco)

5/1/12 Description section updated. “Not Recommended” section updated. References updated. Medical Director review 4/2012. (mco)

8/7/12 Specialty Matched Consultant Advisory Panel review. No changes to Guideline Statements. (mco)

4/16/13 Description section updated. References updated. (mco)

Intra Articular Hyaluronan Injections for Treatment of Osteoarthritis of the Knee

10/15/13  Evidence Based Guideline converted to Corporate Medical Policy. Description section revised. Information regarding preferred medications Euflexxa® and Synvisc/Synvisc One®, added to Policy Statement. “When Covered” section revised as follows: “Euflexxa® and Synvisc/Synvisc One® injections may be considered medically necessary for the treatment of pain in osteoarthritis of the knee when conservative treatment has failed. Non-preferred intra-articular hyaluronan injections may be covered if the patient has previously used at least one of the preferred drugs as indicated above, and such drug has been detrimental to the patient’s health or has been ineffective in treating the patient’s condition.” “When not Covered” section revised to state: “The use of intra-articular hyaluronan injections in the knee is not covered when the above criteria are not met. Intra-articular injections in joints other than the knee are considered investigational.” Medical Director review. References updated. Notification given 10/15/13 for effective date 12/31/13. (mco)

10/29/13  Added the following statement to the “When Covered” section: “Non-preferred intra-articular hyaluronan injections may be covered if the patient is currently receiving treatment with a non-preferred drug.” Effective date remains 12/31/13. (mco)

4/1/14 References updated to include the U.S. Food and Drug Administration (FDA) PMA approval for Monovisc™ (Anika Therapeutics, Inc.). J3490 added to Billing/Coding section. (mco)

12/30/14 Code J7327 added to Billing/Coding section for effective date 1/1/2015. (sk)

12/30/15 Codes J7328 and Q9980 added to Billing/Coding section. (sk)

4/1/16 Code C9471 added to Billing/Coding section. (sk)

12/30/16 Codes J7320 and J7322 added to Billing/Coding section. Codes C9471 and Q9980 deleted from Billing/Coding section. (sk)

4/13/18 Code C9465 added to Billing/Coding section. (sk)

Medical policy is not an authorization, certification, explanation of benefits or a contract. Benefits and eligibility are determined before medical guidelines and payment guidelines are applied. Benefits are determined by the group contract and subscriber certificate that is in effect at the time services are rendered. This document is solely provided for informational purposes only and is based on research of current medical literature and review of common medical practices in the treatment of the condition.
